DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 21-22 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 13-14 of U.S. Patent No. 6,466,304.

Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 21-22 of the present application are merely broader version of claims 13-14 of Patent'304. (It is apparent that the applicant is trying to re-capture the already rejected claims in application serial number 09/422,398 which is now U.S.Pat. 6,466,304).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2851

4. Claims 1-11, 18-20 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Ogawa (U.S.Pat. 5,627,625).

With respect to claims 1-11, and 18, Ogawa discloses an illumination system and corresponding method comprising all basic features of the instant claims such as: a light source (11) for emitting light of desired wavelength (KrF excimer laser) in a optical path toward a pupil (see fig.2); shaping optical system (12-18) having a plurality of masking apertures for shaping the light source into a shaped illumination pattern having one or more zones where the intensity of the light in the zones varies to provide a shaped illumination for each zones (see abstract); a fly's-eye lens (19) for optically integrating light incident on the pupil; a square shape aperture (22) "comprises a translucent substrate and a square pattern or a metal plate with a square aperture", and the square aperture is placed proximate the pupil for squaring the edges of the shaped illumination distribution pattern; and optical means for combining the shaped illumination to illuminating the photomask (25).

With respect to claims 19-20, Ogawa teaches a wedge shaped prism (17) for diffracting the light and forming a pattern of illumination intensity in one or more zones (4 beams) wherein each zone has a shape corresponding to shapes selected from the group as recited (see fig.4).

Allowable Subject Matter

5. Claims 12-17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2851

6. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record either alone, or in combination, neither discloses nor makes obvious the combination of an illumination system where a masking aperture having a half tone diffraction pattern of dithered pixel, with particular structures as recited in the claims, is used for diffracting the light for distributing the light as recited in the instant claims.

Prior Art Made of Record

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

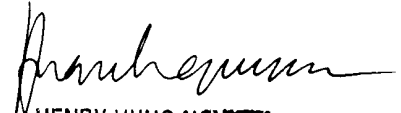

Shiraishi (U.S.Pat. 6,094,305) and Brueck et al (U.S.Pat. 6,320,648) teaches illumination system, each of which comprises substantially all elements as recited in the instant claims of the present application.
